

## TABLE OF CONTENTS

INTRODUCTION . . . . .	-2
BRIEF TABLE OF IDEAS, SYMBOLS, and NOTATION . . . . .	-1
1. THE LANGUAGE OF MATHEMATICS . . . . .	1
expressions versus sentences; sentences have verbs and state a complete thought; conventions; definitions; simplifying an expression; connectives	
2. THE REAL NUMBERS . . . . .	13
the real numbers and where they live; living to the right or left of zero; size (distance from zero) versus order (left/right positioning); opposites; integers; averaging	
3. MATHEMATICIANS ARE FOND OF COLLECTIONS . . . . .	26
introduction to sets; membership in a set; finite versus infinite sets; notation used in connection with sets; the empty set; the idea of ‘infinity’; interval notation	
4. HOLDING THIS, HOLDING THAT . . . . .	40
letters used to represent other objects—variables; variables ‘hold’ objects; variables are used to state a general principle, represent a sequence of operations, represent an ‘unknown’ quantity; solving a sentence	
5. I LIVE TWO BLOCKS WEST OF YOU . . . . .	58
order properties of the real numbers—position of one number relative to another; mathematical sentences used to describe order relationships; the phrases ‘greatest’, ‘least’, ‘at least’, ‘at most’; describing a whole class of sentences in one fell swoop; equations versus inequalities; solution of a sentence in one variable; graph of a sentence; reading a sentence backwards	
6. NUMBERS HAVE LOTS OF DIFFERENT NAMES! . . . . .	75
different names can reveal various properties that a number has; theorems are to a mathematician as tools are to a carpenter; the power of adding zero and multiplying by one; simplifying an expression versus solving a sentence; unit conversion	
7. THESE SENTENCES CERTAINLY LOOK DIFFERENT . . . . .	94
comparing expressions versus comparing sentences; equality of expressions versus equivalence of sentences; connectives; truth tables; synonyms for ‘is equivalent to’; the mathematical words ‘and’ and ‘or’	
8. TRANSFORMING TOOL #1 (the Addition Property of Equality) . . . . .	112
the Addition Property of Equality; facts versus commands; ‘for all’ sentences; translating a theorem; preferred formats for solving a sentence; why the Addition Property of Equality is true; preferred format for checking solutions	
9. TRANSFORMING TOOL #2 (the Multiplication Property of Equality) . . . . .	128
the Multiplication Property of Equality; what goes wrong with multiplying by zero; undoing the last operation first; why the Multiplication Property of Equality is true	
FOR HIGH SCHOOL TEACHERS: Correlation with NCTM Standards . . . . .	143
